

## Customer Portfolio: M.C.'s Salon

### Problem:

M.C.'s Salon is a locally owned business in Springfield, MA, focused on providing great service and an even better atmosphere. However, the owner felt she was overpaying on her electric bill: the costs were just too high for the size of the salon.

### Solution:

Advanced Energy Group was contacted to fix the issue. We subsequently developed a plan to replace the salon's old T12 fluorescent lighting panels, which consume 168 watts per fixture, with new 2x4 flat LED panels, which only consume 32 watts per fixture.

### Results:

Just three weeks after the original call, the new lighting was fully installed and ready for operation. Not only is the client realizing \$615 in annual savings, but she now has greatly improved lighting conditions, and a more modern look for her salon.
